## Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

2. Claims 1 to 3, 5 and 7 to 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Admitted Prior Art Figure 1, Kim et. al. (U.S. Patent Application No. 2002/0041030) and Lee et al. (U.S. Patent No. 5,563,448).

Admitted Prior Art Figure 1 shows most aspects of the instant invention including:

- a substrate 2
- a first insulating layer 20 and a first hole 20 passing through said first insulating layer having sidewalls and a floor directly on said substrate

Application/Control Number: 10/606,048 Page 3

Art Unit: 2814

➤ a first conductive contact **30** comprising barrier layer **26** and a first tungsten conductive layer **28** said first conductive contact extending **32b** onto said first insulating layer outside said first hole

- > a second insulating layer 36 with a second hole 54
- ➤ a second conductive contact 60 comprising a second barrier layer 56 and a second tungsten conductive layer 58 and extending 62 onto said second insulating layer
- ➤ a third hole 22 with a third conductive contact 29 with a third barrier layer 26 and conductive layer 28 and extending 32a onto said first insulating layer
- > fourth and fifth holes 40 with a fourth conductive contact 42
- > a sixth hole **54** through a third insulating layer **50**

Admitted Prior Art Figure 1 does not show the barrier layers consisting of titanium and/or titanium nitride, a groove in said first conductive contact, the second conductive contact filling said groove and the first barrier layer extending onto the first insulating layer outside the first hole.

Kim et al. teach (e.g. Figures 2 and 3) to make barrier layers 414, 420 consisting of titanium and/or titanium nitride, to put a groove 317 in a first conductive contact 414a, 416a and filling said groove with a second conductive contact 421a to suppress separation of the conductive layer from the insulating layer and lower plugs (Paragraph [0009]). It would have been obvious to a person of ordinary skill in the art at the time of invention to make barrier layers consisting of titanium and/or titanium nitride, to put a groove in a first conductive contact and filling said groove with a second conductive contact as taught by Kim et al. in the device of Admitted Prior Art Figure 1 to suppress separation of the conductive layer from the insulating layer and lower plugs.

Lee et al. teach (e.g. Figure 1) to extend a first barrier layer **7** onto a first insulating layer **5** and outside a first hole to prevent metal or silicon electromigration (Column 1

Art Unit: 2814

Lines 55 to 59). It would have been obvious to a person of ordinary skill in the art at the time of invention to extend a first barrier layer onto a first insulating layer and outside a first hole as taught by Lee et al. in the device of Admitted Prior Art Figure 1 to prevent metal or silicon electromigration.

## Response to Arguments

3. Applicant's arguments with respect to claims 1 to 3, 5 and 7 to 12 have been considered but are most in view of the new ground(s) of rejection.

## Conclusion

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, THIS ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

5. Paper copies of cited U.S. patents and U.S. patent application publications will cease to be mailed to applicants with Office actions as of June 2004. Paper copies of foreign patents and non-patent literature will continue to be included with office actions. These <u>cited</u> U.S. patents and patent application publications are available for download via the Office's PAIR. As an alternate source, <u>all</u> U.S. patents and patent application publications are available on the USPTO web site

Art Unit: 2814

(www.uspto.gov), from the Office of Public Records and from commercial sources. Applicants are referred to the Electronic Business Center (EBC) at <a href="http://www.uspto.gov/ebc/index.html">http://www.uspto.gov/ebc/index.html</a> or 1-866-217-9197 for information on this policy. Requests to restart a period for response due to a missing U.S. patent or patent application publications will not be granted.

- 6. Papers related to this application may be submitted directly to Art Unit 2814 by facsimile transmission. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (15 November 1989). The Art Unit 2814 Fax Center number is (703) 872-9306. The Art Unit 2814 Fax Center is to be used only for papers related to Art Unit 2814 applications.
- 7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Howard Weiss at (571) 272-1720 and between the hours of 8:00 AM to 4:00 PM (Eastern Standard Time) Monday through Friday or by e-mail via Howard.Weiss@uspto.gov.
- 8. The following list is the Examiner's field of search for the present Office Action:

| Field of Search  | Date         |  |  |  |  |  |
